

Stock It Easy can be used by multiple users simultaneously on several computers on a network.

To do this, you must install the program on the server or computer server, and on users' computers, just use a shortcut to the program installed on the server.

1. Stock It Easy Install on the server
2. Start the application, then close the application
3. By default, the database and other directories are created in the directory:
  - Windows XP: « C:\Documents and Settings\All Users\Application Data\StockItEasy7 »
  - Windows 7 or 8 : « C:\ProgramData\StockItEasy7 »
4. Move this folder to another disk partition (mandatory), eg the partition E: /
5. Share this new directory (and all subdirectories) so that other computers in the group can access, reading and writing
6. By default, the program is in the directory: « C:\Program Files(x86)\StockItEasy7 »
7. In the folder moved in the step 4, cut the file « stockiteasy7.ini » and paste it in the program folder (step 6), open the file « stockiteasy7.ini », and replace in each occurrence of the word REPERTOIRE the path of the directory of the application by the new path but with the name of the server and the drive letter, for example:
  - DIRECTORY = C: \ Documents and Settings \ All Users \ Application Data \ StockItEasy \ StockItEasy data \ data \ to (path to the application before moving the files)
  - Must become DIRECTORY = \\ MyServerName \ StockItEasy data \ data \ to (new path where you copied the files)
  - You don't know the name of the server? Right-click on the "job", take the "Computer Name", select the name of the computer
  - In the above example, \\ MyServerName replacing E: \
  - If you do not see these directories on your PC, you need via Windows Explorer go to Folder Options, View tab, find and check the list of advanced settings the option "Show folders, hidden files and drives"
8. Save your changes
9. Share the directory where the program by default (step 6), reading and writing
10. Run the program, make sure you are logged into your database, if this is not the case, one of the above advice has not been scrupulously respected, and the program will certainly recreate an empty database also
11. If step 10 is ok, you must connect your "client" computers to the server

12. Since the computer "client", check that you have access to 2 shared directories previously created on the server
13. Connect the shared directory "\\ \ MyNameServer \ StockItEasy data via the Explorer menu" Tools "/" Network Drive "and check" reconnect at the opening
14. create a shortcut to the program stockiteasy.exe on your client computer from the Explorer, right click on stockiteasy.exe and choose "send to" / "Desktop (create shortcut)"
15. You can now launch the program from the shortcut created on the client computer, if you have multiple client computers, repeat the procedure from step12
16. Remember, if you use a version with license key, a valid license key must be installed differently on each computer.
